# Slither io hacked server

Continue

Private servers! Clans! Offline mode! Slither.io is a pretty fun game, but it could always be funner. More fun. Here are nine new features we'd like to see in future updates to the game. Private servers As you're automatically assigned to a random server every time you start a game, you never know who you're going to run into when you play Slither.io. This means it's practically impossible to play with friends. We'd love the option to form a party with other players before joining a server - like in Call of Duty - or even the ability to create a private server just containing your nearest and dearest friends. Clans Failing that, the ability to join a clan and work with other players - even if you're on completely different servers - to be the best bunch of snakes in the world would be cool. You could show off your clan with a special name tag, or even a skin... Custom skins Speaking of that, the mobile edition desperately needs more skins. Not only do we want to the stripy bonus outfits from the PC version, but we also want to be able to make our own disguises. You could pick from a number of templates - simple colour, gradient, stripes, stars, etc - and then choose a colour or two. Then, no matter how big or small you are, you can show off your custom colours. Head on collisions Right now, Slither.io doesn't know how to deal with head on collisions. If two snakes bump each other in the bonce, it's anyone's guess who will live and who will die. A simple fix would be to ensure that the biggest snake always wins in this situation, or to make the two snakes bounce off each other. But how about locking the snakes into a fun duelling mini-game where the player who mashes the screen fastest wins the battle? Obstacles on the map The Slither.io battlefield is a bit boring. It's just a big, flat, circle. It would be cool to add in obstacles like walls, spikes, moving platforms, and lava fields that will keep players guessing, and change up the dynamic of the game. Special powers Another item that could be added to the battlefield is the power-up box. Collect this and you'd be given a random bonus: perhaps a faster boost, a temporary shield, the ability to jump over snakes, or a fireball that makes other snakes slow down. Lag warning The absolute worst thing about Slither.io is lag. If your internet connection isn't up to snuff you're going to be jumping about all over the place, and then randomly whack into a rival snake and die. It would be more than handy to have a warning that your ping (the amount of time it takes for your device to talk to the Slither server and get a response) is too high for smooth gameplay, so you know to stop playing or kick your sister off the DAMN TORRENTS BECKY. Offline mode Okay, so Becky won't stop downloading her damn torrents. Maybe it would be nice to play the game offline with snake bots? This feature is actually coming to Slither.io in a future update - let's hope it appears on mobile, too. Picture upon death When you finally give up the ghost in Slither.io, you'll get your final length and can share this absurdly high number with others on your social network of choice. But wouldn't it be cool to share a photo of what happened when you died? A snap showing your current spot in the leaderboard, and the great sparkling ocean of dots you left behind in your wake would be a better memento than a boring number in the tens of thousands. Want more Slither.io stuff? Then check out the following bits: What do you want to see in Slither updates? Write your ideas on a piece of paper and throw it into the ocean. Confirm your email to enable sharing. Having trouble? x We are experiencing a disruption with email delivery. If you are not receiving emails from us, please try after 8am EST. x If you loved playing the infamous "Snake" game in your childhood, Slither.io could be your current favorite. It is a wonderful browser-based game, also available for smartphones, that you can play in your leisure time. If you find it somewhat difficult, you can try to hack Slither.io using mods, bots, and cheats. This way you can make it a lot easier to beat. In this post, I will explain how to hack Slither.io in your browser, or your smartphone. If you want to beat your friends in school or your colleagues in offices, using Slither.io hacks will be the quickest workaround. About the Game: Slither.io Browser-based games can be your savior when you have got a lot of time to kill. When you are at work or school with nothing left to do, you can play games like Agar.io, Diep.io, etc. Slither.io is another very popular, massively multiplayer, browser-based game, launched after the massive success of Agar.io. It resembles the gameplay of the classic "Snake" game where you have to control your snake/worm, consume multicolored pellets, and grow big. Your ultimate goal is to get as big as you can, while avoid getting beaten by your opponents. Slither.io can be played in a browser, or your Android, and iOS device. The developers have now launched the game for Windows as well. You can download it from the Microsoft store. It is a fun, addictive, and lightwoight game suitable for any mood. What does it mean to hack Slither.io? By hacking, you can modify the way your snake originally works in Slither.io. There are two types of hacks in Slither.io. One type only affects the appearance of the snake while the other type also affects the gameplay. Some common examples of Slither.io hacks are Slither feeder, Slither autoplay, skins creator, Zoom, etc. Slither.io is a browser-based game. Thus, it can be easily hacked by installing certain scripts or mods in the browser. They can be installed using extensions like Tampermonkey, Violentmonkey, etc. Hacks make the game very easier to play. You can get very big but it also ruins the actual fun of the game. If you want to truly enjoy the game, using them is strictly not recommended. Although you can troll your friends by using them. How to Hack Slither.io in Browser? Slither.io is mainly written using JavaScript, and HTML5. You can easily hack it by editing the base code and inserting scripts. Doing that manually is not possible for everyone. So, there are tools available that can do the work within a few clicks. In order to hack Slither.io in a browser, you have to install certain scripts, mods, or bots. To know how to do that, follow these steps: Step-1: Open a browser and open Slither.io in it. I'd recommend using Google Chrome. Step-2: Open another tab in the browser and install the Tampermonkey extension. Step-3: Open one more tab and find Slither.io user scripts on GreasyFork. Step-4: Select the script that you want to install, and open it. Step-5: Click on the "Install this script" button. Next, confirms the installation of the script. Step-6: When it is installed, click on the "Tampermonkey" icon and select "Dashboard." Step-7: Select the user script that you want to activate. Step-8: Switch to the tab where Slither.io is open. Reload the page. When the page is reloaded, the hack will be activated. You can now play the game using the hacks that you have installed. Now you can have fun trolling your friends and opponents. SlitherPlus: Skin Creator Hack, Zoom, Mod & Bots SlitherPlus is a browser extension that lets you hack Slither.io easily. It automatically installs the essential user script when you use it. You don't have to do anything manually. It was previously a Tampermonkey script but converted into an individual extension for ease of use. To use it, add the extension to your browser, and open Slither.io. Now click on the "SlitherPlus" icon present on the right side of the URL Bar. Once activated, you can use all the available hacks and skins to enhance your gameplay. If you wish to stop using it, you just need to click on the SlitherPlus icon once again. To stop using it permanently, you can uninstall it from your browser. Download Slither.io Hack MOD APK If you play Slither.io on your Android mobile and want to hack it, you just need to install its modded version. Before doing that, uninstall the original game from your device. Go to Settings and enable the "Allow installation from unknown sources" feature. After that, download the Slither.io MOD APK from the link below. Download Slither.io MOD APK The modded version of Slither.io is not available on the Google Play Store. You have to download it from here and then install it on your device. Once installed, launch the game and have fun. You will find various useful features like no-ads, invisible skin, God mode, and many more. Can you hack Slither.io on iPhone/iPad? You cannot hack Slither.io on your iPhone or iPad unless the device is Jailbroken. Apple uses strict security protocols that make it nearly impossible to install the modded version of Slither.io on iOS devices. That's why trying to hack Slither on an iOS device is impractical. Best Slither.io Tips, Tricks & Cheats to Get Bigger If you want to get bigger in Slither.io without hacking or cheating, here are some tips and tricks. Using these, you can get bigger and shock everyone else. Stay near the big snakes to find big kills and big gains. Use boost and kill big guys when you are small. When you reach 1000+ points, move slower. Boosting is good to get big quickly, but you become prone to dying. When you reach 5000+ points, stop boosting. Aim for double and triple kills by observing patterns of other players. When you reach 10,000+ points, start moving extremely slow. These are some simple tips that play a vital role in making your snake the biggest alive. Final Take Slither.io is a brilliant browser-based game. You can play it for hours without getting bored. Eventually, when it starts getting boring, you can bring some hacks and mods into play to freshen things up. Using hacks, you can shock every player on the server. You can also use the hacks to troll your friends. I wouldn't recommend using hacks for regular gameplay. It will spoil all the fun. That's all for this post. I hope you find it helpful. Feel free to share your highest score of Slither.io in the comments section.
